ALEXIS LARIN

Principal Product Designer

Focused on complex products, B2B and engineering tools. Transforming complicated workflows into intuitive and user-friendly experience.

Experience across early-stage startups and enterprises, consumer apps and engineering tools, both hands-on and design leadership.

What I do best:

– design ownership;
– product thinking;
– designing with implementation in mind.

Currently: Tbilisi, Georgia

Open to remote or relocation

ETOSO.AI / LEAD PRODUCT DESIGNER (2025–2026)
Sustainability intelligence startup, HQ: London, UK

Data tool for exploring the sustainability practices and benchmark performances — all extracted from public company reports. Took over an early product concept from a creative agency and shaped it into a launch-ready product together with the PM — defining product structure, core workflows and UX, and driving design through several subsequent pivots. Also designed the website and marketing assets.

SODA.AUTO / PRINCIPAL PRODUCT DESIGNER (2022–2025)
Automotive engineering software, HQ: London, UK

Sole product designer across a suite of tools covering the automotive software development and validation lifecycle — requirements management, systems architecture, test design, vehicle software configuration and configuring test runs for a connected hardware validation rig.

Worked directly with engineering lead and founder, with substantial ownership of product concepts, workflows and feature decisions from zero to launch. Also owned brand, website and marketing design hands-on.

ARRIVAL / PRODUCT & DESIGN LEAD (2015–2022)
EV technology company, HQ: London, UK

Developed a toolchain for configuring vehicle electric and software architecture with some automations that never existed before in automotive. From idea through prototype and launch to production and proved the efficiency.

Hands-on designed the solution inventing ways to simplify and automate everything possible. Owned product direction, roadmap and feature prioritisation, while leading a team of 12 engineers from concept through production.

Hired and mentored Product Designers in nearby products (vehicle online monitoring and diagnostics, vehicle configuration, vehicle software update).

JAMI / PRODUCT DESIGN LEAD (2013–2015)

Leading the total redesign of mobile application for our client — Russian Post (primary mail service in Russia). From sketching client's ideas to consulting developers on the construction stage. App Store app rating soared from 2 to nearly 5 after redesign launch.

Led the product design direction across platforms: designed the iOS experience hands-on and guided other designers adapting it for Android and Windows.

STREAM / HEAD OF DESIGN (2009–2013)

Identity and design of online video streaming service. Started from conceptual work with a London design agency, built and led the in-house design team that brought the service to web, mobile and Smart TV platforms.

MAIL.RU / HEAD OF PRODUCT DESIGN (2005–2008)

Grew the design department from 3 to 12 people. My team was responsible for design and front-end development of all Mail.Ru products.
