Etoso.ai • Lead Product Designer

2025–2026

ESG data AI platform for exploring the sustainability practices and performance, HQ: London, UK

Led end-to-end product design as the sole designer. Took over a concept from a creative agency and shaped it into the product launch — defining product structure, core workflows and UX, and driving design through several subsequent pivots.

Designed internal tools, website and marketing assets.

SODA.Auto • Founding Product Designer

2023–2025

Automotive engineering software, HQ: London, UK

Designed a minimalist and intuitive professional tool around complex regulated engineering process of automotive software design and validation lifecycle — requirements management, systems architecture, test design, and configuring test runs on a connected hardware rig.

Worked directly with engineering lead and founder, with substantial ownership of product concepts, workflows and feature decisions from zero to launch. Also designed brand identity and marketing assets.

Arrival • Product and Design Lead

2015–2022

EV technology company, HQ: London, UK

Led the development of a toolchain for configuring vehicle electric and software architecture with some automations that never existed before in automotive. From idea through prototype and launch with proved efficiency.

Hands-on designed the solution (pipelines and web application) inventing ways to simplify everything possible. Owned product direction, roadmap and feature prioritisation, hiring and leading a brilliant team of 12 engineers.

Hired and mentored Product Designers in nearby products (vehicle online monitoring and diagnostics, vehicle configuration and calibration, vehicle software update).

JAMI • Product Design Lead

2013–2015

Design & marketing agency, Moscow, Russia

Led the total redesign of mobile application for our client — Russian Post (primary mail service in Russia). From sketching client’s ideas to consulting developers on the construction stage. App Store app rating soared from 2 to nearly 5 after redesign launch.

Designed the iOS experience hands-on and guided other designers adapting it for Android and Windows.

Stream • Head of Design

2009–2013

Movies and TV series streaming, Moscow, Russia

Led the design of identity and product from 0 to launch.

Started from conceptual work with a London design agency, built and led the in-house design team that brought the service to web, mobile and Smart TV platforms.

Mail.Ru • Head of Product Design

2005–2008

Moscow, Russia

Hired as designer and promoted in half a year.

Grew the design department from 2 to 12 people. My team was responsible for design and front-end development of all Mail.Ru products.
